
Bremco's Forklift Extension Slippers allow you to temporarily lengthen the tynes of your forklift for load stability and are ideal for large crates or machinery items.

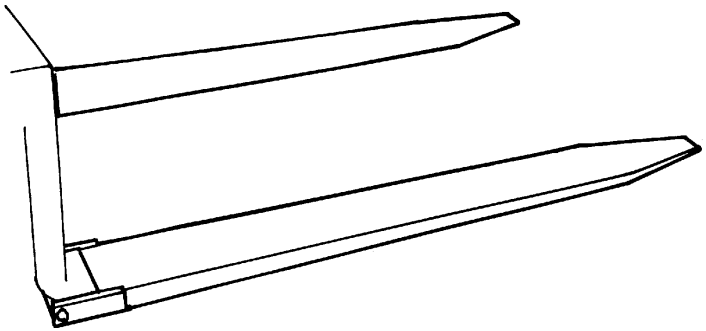
The slim profile of our extension slippers are made from fully fabricated plate sections.

Bremco recommends you do not exceed 167% of the supporting tyne's length in order to maintain your Forklift's load capacity.

SPECIFICATIONS

- See data chart below
- Available in three carriage classes
- Available in four standard lengths
- Finish: hot dip galvanised

The BMP003 slipper range complies with AS2359.17 and is supplied standard with a compliance plate and serial number. This range is manufactured only from high quality Australian steel plate.



Code	Length (mm)	Inside Dims (mm)	WLL/pair @ 600mm L/C
CL3180	1800mm	164mm x 60mm	5000kg
