

TINE WIDTH

SPECIFICATIONS

- See data chart below
- Available in three carriage classes
- Available in four standard lengths
- Finish: hot dip galvanised

The BMP003 slipper range complies with AS2359.17 and is supplied standard with a compliance plate and serial number. This range is manufactured only from high quality Australian steel plate.

Bremco's Forklift Extension Slippers allow you to temporarily lengthen the tynes of your forklift for load stability and are ideal for large crates or machinery items.

The slim profile of our extension slippers are made from fully fabricated plate sections.

Bremco recommends you do not exceed 167% of the supporting tyne's length in order to maintain your Forklift's load capacity.

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE

In some cases, please allow up to 6 weeks manufacturing time.
